本物の質感を生かす仕上がり

無垢材を随所に使用。全体から感じられる無垢の風合いは、突板だけでは醸成できない高級感を放っています。また、木材の内部に浸透する含浸塗料を使い、本来の質感や天然素材特有の美しさを残して仕上げています。そのため多くの木製品に使用されている、塗膜で素材を覆うコーティングとは手触り・質感の点で大きな違いがあります。

Finishing with authentic texture.

Solid wood is used in various parts of a product. The texture of solid wood emanating from the entire product gives it a luxurious feel which cannot be created by sliced veneer alone. We also use impregnating coating that penetrates deep into the wood, retaining the original texture and beauty of the natural material. Therefore, there are significant differences in touch and texture compared to the coating used on many other wood products which are covered with a thin layer of paint.
